TEST NOTES

Some of the key insights discovered during tests

- Lack of compare button on the schools' cards at the main search page
- Lack of previously liked schools' button on the schools' cards at the main search page
- Some of the advanced search functionalities are still non-functional
- Advanced search functionalities are limited based on some scenarios
- School indicator icons on the map should have label, and micro interactions on them
- When user signs in, user profile and log out button are missing on the pages
- When school indicator icon on the map hovered, relevant school on the schools' card should appear with different look than other schools
- Ranking of the school label is missing at the schools' card on main search page. It is only present on the relevant school's details page

Feedback from users

- All three of the users liked the functionalities of the school search
- Two of the users think layout is too minimalist
- All the users liked the color combinations, font choice and images used on the pages

Surprise cases

What surprised me was that I missed log out button and user profile icon on the scenario when user signs in. Also, on school comparison page when scrolled down school names should be stay fixed on the top of the page.

Design suggestions

Overall, all the users liked the design. But two of them think layout is too minimal. General UI can be refined. Background should be changed with gradient color or image on the main search page.
